I am a Full-Stack Developer and a Computer Engineering Technology Study Program graduate from Politeknik Negeri Semarang with more than 2 years of experience in developing web and mobile applications. I have experience working on both **backend** and **frontend development**, allowing me to build complete end-to-end solutions from system architecture to user interfaces.

With a strong understanding of full-stack development, I am able to design efficient systems, develop reliable APIs, and create responsive and user-friendly applications. My experience across different layers of development enables me to approach problems from multiple perspectives and deliver robust solutions.

I am a fast learner who enjoys solving complex problems and adapting to new technologies. I thrive in collaborative environments and am committed to delivering high-quality, scalable, and maintainable software solutions.

WORK EXPERIENCE

PT Logika Data, Semarang (Remote/WFH)

Des 2025 – Present

Software Developer

- **customized application UI/UX using Jetpack Compose**, tailoring existing design systems to meet specific client requirements and ensure a responsive user experience.
- **Refactored and enhanced an existing Android codebase**, integrating new custom features while maintaining code stability and performance logic.
- **Translated business requirements into functional mobile features**, adapting the base application architecture to align with dynamic project goals.

PT Violet Global Indonesia, Semarang (Hybrid)

Oct 2025 – Feb 2026

FullStack Developer

- **Engineered scalable RESTful APIs** using **Django (Python)** to support high-performance frontend interactions and ensure seamless data flow.
- **Implemented asynchronous background processing** using **Celery** to handle intensive file uploads, significantly reducing server response time and improving user experience.
- **Developed a robust document management system**, including secure storage handling and automated deletion workflows to optimize database and storage efficiency.

PT Campus Digital Indonesia, Semarang

Sep 2024 – Dec 2024

Software Developer

- Developed backend API for marketplace platform **using Laravel**.
- Implemented real-time chat system with WebSocket.
- Built product recommendation system using Algolia search engine.
- Designed and implemented product management (listing, details, reviews, and ratings).
- Created storefront (etalase) feature for merchants.
- Developed shopping cart system with seamless user experience.
- Integrated manual payment system using QRIS.

Serenade Story, Jakarta Raya (Remote/WFH)

Dec 2023 – Jan 2024

Frontend Developer

- Implementation design from figma to Website with **Next JS framework**.
- Implementation Pagination on Article.
- Integration API with AXIOS
- Fix responsive design
- Fixing chat feature

PT Phapros Tbk, Semarang

Jan 2020 – Jan 2021

Machine Operator

- Chemical drug printing.
- Chemical drug manufacturing.

Petrokimia Gresik PT, Gresik

Jun 2019 – Dec 2019

Instrument Technician

- Calibrating sensor transmitters.
- Replacing sensor transmitters.
- Performing maintenance and cleaning of transmitters in the factory.

EDUCATION

BANGKIT ACADEMY BY GOOGLE TOKOPEDIA,
GOJEK, & TRAVELOKA

Feb 2024 - Jul 2024

Mobile Development Learning Path

- Study material related to Android application development, **such as Kotlin, Android Studio**.
- Implementing a **machine learning model using TFLite**.
- Learning how to use machine learning libraries such as **ML Kit**, etc.
- Work with the team to develop Android applications based on the given case studies.

POLITEKNIK NEGERI SEMARANG

Sep 2021 – Sep 2025

Bachelor of Applied Engineering

Cumulative GPA: 3.84/4.0

Relevant Coursework: Relevant Coursework, Object-oriented programming, Data structure, Interoperability, Database design, Database Programming, Mobile programming, Framework-based web development

TECHNICAL SKILLS

Languages: PHP, Kotlin, Javascript, Typescript, React

Database: MySql, PostgreSQL, MongoDB, Firebase

Web/Mobile Framework: Laravel, Next Js, Astro Js, Express Js, Android Native (Gradle), TailwindCSS

Version Control: Github, Gitlab

PROJECTS

MySporty Application

- **I developed a sports application** that automatically tracks exercise movements using the device camera. The application was built with **Android Jetpack Compose (Kotlin)**, integrated with **Supabase** for data storage, and **TensorFlow Lite** for the machine learning model.

House Shiatsu and Spa

- In collaboration with my team, we developed a mobile application designed for booking massage therapists at Griya Bugar. The application enables users to easily book available therapists and is integrated with Firebase Cloud Messaging (FCM) to deliver real-time notifications to the admin whenever a booking is made. **My role in this project was as an Android Developer, responsible for building and developing the mobile application.**

Nursing Student Mother Heart Connection

- In collaboration with my team, we developed a mobile application called NSMHC (Nursing Student Motherheart Connection), a training platform designed to help mothers practice mindfulness and emotional management techniques. The application guides users in developing better emotional regulation, fostering inner peace, resilience in facing challenges, and contributing to the well-being of both mother and child. **My role in this project was as a Backend Developer using Laravel, where I was responsible for building APIs for both the mobile application and the web-based dashboard.**

BelaBeli

- As part of my role at Campus Digital Indonesia, **I worked as a Backend Developer using Laravel** responsible for building a marketplace API. My tasks included developing the product recommendation system, shopping cart, product catalog, product management, ratings and reviews, as well as implementing manual payment integration using QRIS.

Nutrient Mobile Apps

- NUTRIENT based on the theme Health Innovation: Empowering Vulnerable Communities for Health and Well-being, and our project title is Nutrient-Nutrition Table Assistant. Our team was inspired by the eating lifestyle in Indonesia. Most Indonesians don't adopt a healthy lifestyle and don't pay attention to serving portions. Our team chose the topic "HealthCare" for creating the capstone project. The application we created carries content such as scanning nutrition labels whose data will be processed into information that is useful for monitoring health aspects based on the Body Mass Index of the user and search for details on the nutritional content of food and beverage products circulating in Indonesia. Through this application, people will be more concerned about health through the value of nutritional content consumed. **My role in this project was as an Android Developer, responsible for building and developing the mobile application.**

Fittrack Mobile Apps

- In collaboration with my team, we developed a mobile application using Android Studio aimed at monitoring physical health. This app assists users in maintaining their fitness by providing comprehensive tracking of their daily activities and dietary intake. By offering personalized insights and recommendations, the application ensures that users can stay healthy and active in their everyday lives. **My role in this project was as a Backend Developer, responsible for building and managing the APIs that supported the mobile application.**

Student Activity Unit Management System.

- In this project, I worked as a **FullStack Developer, utilizing Laravel for the backend and Next.js for the frontend**. The system is designed for Student Activity Units, accommodating various organizations that students can join. The features of the system include user roles such as Admin, User, and Super Admin, scheduling duties for each member of the Student Activity Unit, meeting schedules, member lists, registration forms for joining an organization, and security features using email verification.

Website for downloading anime.

- In this project, **I developed the entire website using Laravel**. The website is specifically designed for downloading anime. It includes a Content Management System (CMS) that utilizes the Stisla Admin Dashboard template, allowing for dynamic updates and modifications to the website's content

Ecommerce.

- In this project, I developed a **full Laravel-based eCommerce website** for selling fruits and other items. The website features include a WhatsApp Gateway for sending order confirmations to customers via WhatsApp, an Invoice feature, a Shopping Cart feature, and user security features such as password recovery and email verification.

Wedding Organizer.

- In this project, **I served as a front-end developer** at Serenade Story, I developed it, used Next.js application where my tasks included ensuring responsive design, implementing designs from Figma, implementing pagination for articles, and refining the chat feature

TRAINING AND CERTIFICATION

Indonesia International Invention Expo | IIIEX

- Awarded Gold Medal for the project "Implementing MLP and MediaPipe in Mobile Exercise Tracking to Improve Movement Detection Accuracy." (MySporty Application)
- Received MIICA Special Award for the project "Implementing MLP and MediaPipe in Mobile Exercise Tracking to Improve Movement Detection Accuracy." (MySporty Application)

Android Application Intermediate | Dicoding

- Understand the concept of MVP (Model-View-Presenter) and MVVM (Model-View-ViewModel) in Android application development.
- Able to build Android applications with data CRUD (Create, Read, Update, Delete) features.
- Learning how to implement pagination.
- Learning how to use unit tests.

Learning the application of machine learning for Android | Dicoding

- Implementing a machine learning model using TFLite.
- Learning how to use machine learning libraries such as ML Kit, etc.
- Developing an application to detect skin cancer using image processing.

Database Design | ORACLE

- Designing a database provided by Oracle.
- Creating an Entity-Relationship Diagram (ERD).

Database Programming | ORACLE

- Implementing the ERD using SQL.

VSGA - Junior Mobile Programmer | Digital Talent Scholarship

- Implementation LBS (Location Based Service).
- Learning about sensors and how to use them in Android Studio.
- Creating an application using SQLite.
- Certified as BNSP Junior Mobile Programmer.

LSP Polines

- Understand how the Laravel framework works.
- Implement designs from Figma into a website.
- Develop simple CRUD logic using native PHP.
- Certified as BNSP Junior Web Programmer.

MTCNA | MikroTik Certified Network Associate

- Applied essential networking fundamentals including Ethernet/LAN setup, TCP/IP, IP addressing, subnetting, DHCP (server & client), and NAT.
- Performed troubleshooting and network management tasks including monitoring via tools like Ping, Traceroute, Netwatch, Torch, and SNMP.

Big Data Analyst Associate | SOLUSI 247

- Applied SQL and NoSQL queries for data extraction and analysis..
- Implemented data visualization techniques to generate insights and support decision-making.
- Understood the principles of data warehousing, ETL processes, and distributed data systems.
- Learned how to process, clean, and transform data for analytical purposes.
